SUU Studies the Science of Journée's Lighting

State-of-the-art designer installs luminaires in newly dedicated science center

(CEDAR CITY, Ut.) – Southern Utah University's new \$15 million Center for Health and Molecular Sciences is now home to 105 award winning *Lotus* LED Luminaires designed and manufactured by Journée Lighting of Westlake Village, California.

These state-of-the-art pendants span 122 linear feet of the 48,442 square foot science center to feature works of art in the quaint science museum and throughout the building. The fixtures compliment the new structure with their modern details, clean lines, and economical features.

Journée Lighting's *Lotus* LED Luminaire is stylish and environmentally friendly. This sleek, high-tech LED luminaire is designed to not only appeal to the eye, but also perform as a heat sink, resulting in longer lamp life and higher efficiencies. Its field-replaceable GE Infusion LED Module allows the user to replace the LED without disposing of the fixture itself.

The Center for Health and Molecular Sciences, a complex built to meet an increasing demand for pre-medical, chemistry, and nursing educational programs stands where SUU's Life Science Building once stood. The structure was demolished during the summer of 2009 to make way for the new, state of the art science center.

Dedicated in September 2011 during the University's Homecoming festivities, the structure includes a five-room rooftop greenhouse, expanded and updated labs and lab support areas, animal care rooms, a much-needed science-specific study lounge and office space for faculty and advisors.

About Journée Lighting, Inc.

Headquartered in Westlake Village, California, Journée Lighting, Inc. designs and manufactures state-of-the-art LED lighting fixtures, including the award winning *Lotus* and *Azara* luminaires.

Journée also designs and manufactures specification-grade Monorail and Monopoint systems for use with its LED Luminaires. For more information, pricing and availability, please visit
